

JES Docking Station™ Placement & Installation

- 1) Identify exact location on table / desk top surface for placement of Docking Station and ensure proper distance from electrical outlet. (If your JES lamp has a Convenience Outlet, you may use this to power your Docking Station).

***This is where the Station will be permanently located after installation.**

- 2) See underside of unit for the 2-sided *industrial-strength* mounting tape. Peel back outer sheet of the tape, place the station on the exact spot for its use and press down for 30 seconds to allow tape to set.

- 3) For additional security, use either brackets with screws or double pointed tacks to secure the power cord along the back/side of the table or desk.

- 4) Plug in Docking Station and enjoy!
